Remove Temporary Files to fix Error 30169-22

In the process of installing Microsoft 365 or office 2021/2019/365 or any product on your windows machines, there are so many files gets created which are meant for temporary purpose for memory management, within application purposes like MDI etc.

Under normal conditions, these files are closed and deleted by Windows when you quit a Windows session. However, if you quit Windows in an irregular way (for example, restarting the computer or turning it off during an active Windows session) the files are not closed or deleted.

To remove temporary files, Follow these steps,

1. Click on windows start button + “R” to open the run command window.
2. Type “%temp%” and click on the enter button, this leads to a window with temp files and folders.
3. Select all (CTRL+A) “Shift + Delete” to remove permanently,

There may be some files that require admin permission to remove, Just click on ok. Only a few files cant be deleted because of there are some applications that might be using them internally. Skip those files.
