

How to Fix Outlook Error Code 0x8004210B in Windows 10/11

Error Code 0x8004210B is a common issue that Outlook users may be experiencing this error when sending or receiving emails. This error typically indicates a problem with the Outlook configuration or connection settings.

If you have come across this error, don't worry. In this article, we will delve into the causes behind this [Outlook Error 0x8004210B](#) and provide you with effective solutions to resolve it.

Solutions for this Outlook Error 0x8004210B in Windows 10/11:

Method 4: Check network connectivity

Ensure that your internet connection is stable and functioning correctly. Try accessing other websites or online services to confirm if you have any network connectivity problems. Restart your modem, router, or other network devices if necessary.

Method 5: Create a new Outlook profile

Sometimes, creating a new Outlook profile can resolve persistent issues.

1. Open the Control Panel on your computer.
2. Go to the Mail settings.
3. Create a new profile.
4. Configure your email account(s) in the new profile and test if the error persists.

Method 6: Reinstall Outlook

If all else fails, consider [reinstalling Microsoft](#) 365 Outlook. Uninstall the existing Outlook application from your computer, download the latest version from the official Microsoft website, and reinstall it. This process may help to fix any underlying issues related to the Outlook installation.

Conclusion:

If none of the above steps resolve the issue, it is recommended to seek further assistance. You can consult **Microsoft's support** forums, visit their official website, or contact their customer support directly for more advanced troubleshooting options.
